9. <i>P. occidentalis</i> B	15.4	14.7	14.9	16.8	12.1	12.9	17.5	8.0	0.1

Figure S1: Estimated relationships among the six species of the genus *Psammodromus* derived from Bayesian inference (BI; left) and Maximum likelihood (ML; right) analyses using the models explained in the text, based on 300 bp cytochrome *b* sequences (nine from this study 354 retrieved from GenBank). The sister genus to *Psammodromus*, *Gallotia*, was used as outgroup in the ML tree. Numbers above the nodes correspond to bootstrap support and posterior probability from ML and BI analyses, respectively. In red the clades enlarged in each page and the specimen codes from this study.
